Wildlife Computers is the leading provider of advanced wildlife telemetry solutions. But we don't just sell tags. Our consultation team—which includes on-staff biologists—works to understand your project goals including what data you need, what animal you are researching, environment, and more.

The team uses knowledge gathered over the last 30 years on best practices, techniques, and procedures to make recommendations for getting the data you need to meet your objectives. Data from our tags appears in more than 2,300 peer-reviewed publications and plays a key role in many management decisions, policy changes, outreach and education initiatives worldwide.

How We Got to Where We Are
Since 1984, Wildlife Computers has grown from a core group of people designing, manufacturing, selling and supporting custom marine tags to the leading provider of advanced wildlife telemetry solutions to the scientific community.

Our Mission as a Company and Global Citizens
Wildlife Computers mission is to promote the sustainable use of our global environment by creating the most innovative technologies that empower data-driven decisions.

The Wildlife Computers Difference
Wildlife Computers provides an unsurpassed commitment to quality in the design and manufacturing of our tags. We are constantly evolving with our industry to provide the best products and solutions to meet our changing world.

Wildlife Computers uniquely offers:
- An extensive product range—over 250 shapes and technology combinations to get you the best data for your study.
- Reasonable lead times with a commitment to ship dates without sacrificing reliability.
- Unsurpassed commitment to quality & customer service.
- Value-added, online data solutions like the Wildlife Computers Data Portal—the portal captures, decodes, and stores your data online, supports automatic data retrieval by government-mandated data management systems, and provides an intuitive interface to review your data anywhere/anytime you have Internet access.

75-ish-word Company Description

Wildlife Computers is the leading provider of advanced wildlife telemetry solutions.
